

RED EARTH

Dear Educator

The Red Earth Education Committee wants to inform you of an exciting project we hope will help educators integrate art, history, language, math and science into daily lessons that include Oklahoma's unique Native American heritage. We are asking educators to assist in the development of these lessons.

Red Earth, Inc. is a non-profit 501(c)3 organization that oversees the daily operations of the Red Earth Museum and produces the award-winning Red Earth Festival. It has, for over 35 years, been dedicated to promoting the richness and diversity of Native American art and cultures.

For the past two years the Red Education Committee has worked hand in hand with educators from throughout the state to develop grade appropriate lessons that focus on STEM subjects (science, technology, engineering and math). We are now expanding that opportunity.

Please consider becoming a part of our team by developing lessons and activities that will engage Oklahoma youth.

Not only will we provide you with professional development credit, you will receive professional recognition for your contribution.

It's really easy to participate!

You may choose:

1. To modify an existing lesson plan that we provide, using the Red Earth standard lesson format,

Or

2. To use our format to create an original lesson.

To be a part of this team, please go to <http://www.redearth.org/curriculum-project/> to learn more about the project and make your commitment.

Best regards,

Freda Deskin, PhD
Chairman, Red Earth Education Committee
