

# BUILD YOUR OWN APPS

**April 22 1:00 PM**  
**Meacham Auditorium**

**Join Apple engineers as we discuss and demonstrate Apple's latest software development tools for the iPad, iPhone and iPod Touch, and show how individuals and institutions are building innovative mobile applications for their organizations and the wider world.**

We will highlight what's new for developers with iOS 7, deconstruct some popular applications, and show you how to get started building your own with Apple's free tools.

We'll talk about native application development with Xcode. And if the presenter messes up, we may accidentally wind up demonstrating the debugger as well.

**UNIVERSITY**

where innovation meets tradition
