

## REU SITE: IMMERSIVE RESEARCH IN THE BIOARCHAEOLOGY OF GREEK COLONIZATION, SICILY, ITALY

- Travel to Sicily; live in Campofelice di Roccella
- Visit museums & archaeological sites
- Learn field and lab techniques for studying human skeletal remains
- Conduct original bioarchaeology research
- Join a multicultural team and receive mentorship from top scholars in anthropology
- Develop skills for presenting and publishing original research
- Pave the way for future career options

This **National Science Foundation Research Experience for Undergraduates Site** provides eight competitively-selected undergraduate students from across the country with housing, meals, travel to Sicily for four weeks, apprenticeship at University of Georgia labs for four weeks, and \$500/week stipends. During the eight-week program, students **investigate the impacts of culture contact** while planning and executing independent bioarchaeology research projects. Historically underserved students are encouraged to apply.
